Please note: LEONI herewith warrants that the delivery items contained in this catalogue will be of the agreed nature and quality upon passing of the risk. Aforementioned nature of the delivered items shall be exclusively rated and measured by the sales and purchase agreements made in writing between LEONI and the purchaser about nature and quality, properties and characteristic performance features of the respective delivery item. Illustrations and information contained in catalogues, price lists and other information material disclosed to the purchaser by LEONI as well as any information describing the product shall be only legally binding, if expressly being referred to as binding information. Under no circumstances, such information shall be taken as guarantee for the special quality or nature of the delivery item. Such quality guarantees must be explicitly agreed upon in writing. LEONI herewith reserves the right to modify the content of this catalogue at any time.

The LEONI Group

Cable expertise for the most varied industrial markets

LEONI is a leading supplier of cable systems and related services for the automotive industry and various other industrial sectors.

Our group of companies employs more than 63,000 people in 31 countries. Corporate vision, highest quality and innovative power have made us one of the leading cable manufacturers in Europe. LEONI develops and produces technically sophisticated products ranging from wire and optical fibers to cables through to complete cable systems and also offers the related services. Moreover, the product portfolio comprises strands, standardised cables, hybrid cables, glass fiber as well as special cables, cable harnesses, wiring systems components and fully assembled systems for applications in various industrial markets.

Your markets – our strength.

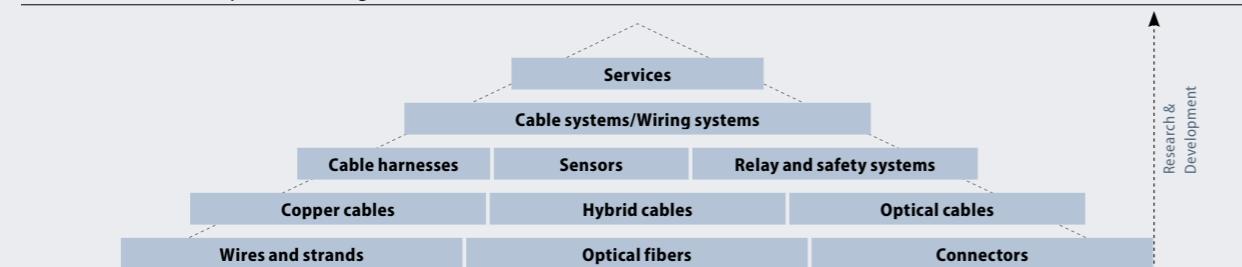

As diverse as our product and service range are the markets and sectors LEONI is supplying. We focus our activities on customers in the fields of Automotive & Commercial Vehicles, Industry & Healthcare, Communication & Infrastructure, Electrical Appliances and Conductors & Copper Solutions.

We are amongst the worldwide leaders in some product areas in the automotive market. Customers of our automotive cables business unit throughout the world benefit from innovative, reliable and long-lasting high-quality products.

LEONI – we create the best connection for your future.

LEONI's core markets

Business Unit Automotive Standard Cables

Our core competencies

Since 1931 LEONI is a leading manufacturer of cables and conductors for the automotive industry and has advanced to become the world's largest and most successful supplier – a truly global player.

The Business Unit Automotive Standard Cables is among the global market leaders for single-core automotive cables and supports you through its comprehensive product range with a wide variety of approvals from OEMs and Tier 1 customers.

Global presence:

Proximity to the customer is a key part of our corporate policy. In addition to production facilities in China, Germany, India, Morocco, Mexico, Poland, Turkey and Hungary, LEONI offers you a global marketing and product management network which advises and supports you the world over.

Extensive product range:

LEONI supplies cables in accordance with international standards, such as ISO (Europe), JASO (Japan) and SAE (United States) and based on the specifications of all major international car-makers.

High quality standard:

Standardisation of methods and the clear definition of processes ensure a consistently high level of LEONI quality at all production facilities in all corners of the globe.

In short:

The broad and varied range of services offered by the Business Unit Automotive Standard Cables makes it a sought-after partner of wiring systems manufacturers and assemblers around the world.

Marking of automotive cables

Manufacturer's markings

1. Single-core cables with a nominal cross-section of 0.5 mm^2 and more are permanently marked with the manufacturer's logo "LEONI" at maximum intervals of 200 mm (embossed or printed).

The marking of wires with a nominal cross-section smaller than 0.5 mm^2 is the subject of agreement between the customer and supplier.

2. In addition to this marking, the identification for the individual plants can be expressed by an additional letter.

Colour coding

1. The colours commonly used for the insulation of automotive cables are: white, yellow, grey, green, red, violet, brown, blue, black, orange (DIN 72551-7 and DIN IEC 304). Other colour identifications are permissible on request.

2. Two-colour automotive cables are marked by two diametrically opposed extruded longitudinal stripes. The width of every stripe must cover at least 7 % of the surface of the wire, with both marking stripes together covering at most 35 % of the surface.

3. Tricolour automotive cables are marked according to LV 112-1:

- 1. First colour: primary colour
- 2. Second colour: longitudinal stripes (as under 2 above)
- 3. Third colour: in the form of rings

Width of rings $3 \pm 1 \text{ mm}$. Distance between two successive rings: 6 to 20 mm. An offset of maximum 1 mm between the two ring halves is permissible.

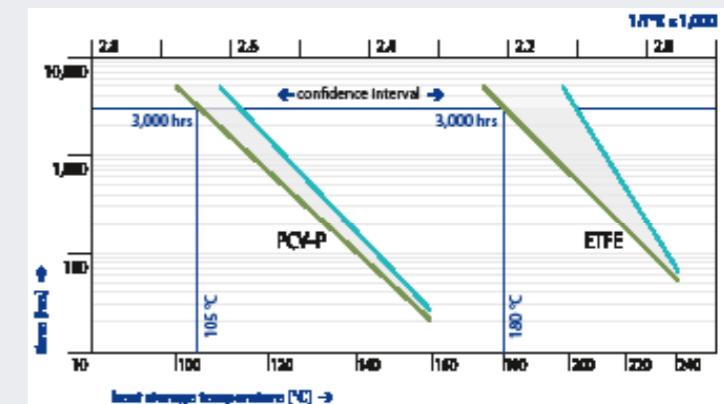

Other markings

On request the wires can also be supplied with numbers printed on them. Since automotive cables fall into the class of low-voltage wires, no CE marking is needed. Cables in the high-voltage range should be provided with orange as a primary colour.

Insulation materials

How to determine the continuous service temperature.

temperature/time curve
measurement curve

LEONI develops and uses insulation materials that provide high reliability and durability under operating conditions. The structure and properties of the materials used are listed below and in the table on page 8–9.

Thermoplastics

Plasticized or semi-crystalline polymers
Viscoplastic properties in the service temperature range
Plastically ductile at temperatures above the yield limit

Thermoplastic elastomers

Polymer soft and hard segments
Rubber-like elastic properties in the service temperature range
Plastically ductile at temperatures above the yield limit

Elastomers/crosslinked plastics

Crosslinked polymer soft and hard segments
Rubber-like elastic properties with high reversible deformability in the service temperature range
No thermoplastic flow properties – the crosslinked structure is retained up to decomposition temperature, i.e. well above service temperature

Requirements and quality

Material testing and development according to customer specifications and/or national and international standards
Optimisation of properties to meet changed or new requirements
Regular quality control in the form of product audits

Selection criteria

Service temperatures
Electrical values
Flexibility/hardness
Mechanical stability under load
Wear resistance
Resistance to oil, fuels, brake fluid, acids/alkalis, organic agents
Flame-retardant
halogen-free
low halogen

Service temperatures

The low service temperature range is determined by cold strength tests, dynamic bending strength tests or by wrapping tests at low temperature in accordance with ISO 6722-1. The maximum continuous service temperature for materials with impairment of specific material properties is defined by the temperature index according to DIN ISO 2578.

Temperature-time curves with a 50 % reduction of the original elongation at break after heat storage define the temperature index at 3,000 hrs. Higher temperatures are permitted for shorter time intervals (thermal overload capacity).

The diagram above shows examples of how to determine the continuous service temperature. The measurement curves lie above the temperature-time curves specified for the material. The zone in between represents the confidence interval.

Insulation material properties

All compounds used are lead free.

Conductor materials

Most of our conductor material is copper (Cu). For the production of our wires we mainly use Cu-ETP1 (oxygenic copper) and Cu-OF 1 oxygen-free copper for special applications (e. g. hydrogen resistance).

In addition to pure copper we also process a variety of copper alloys for special applications.

Extract from EN 1977 – copper and copper alloys – raw wire made of copper

Symbol	Material number	Composition	Density	Melting point	% IACS min.	Notes on properties and use
Oxygenic copper						
Cu-ETP1 (E-Cu)	CW 003 A	Cu ≥ 99.90 oxygen max. 0.040	8.9	1,083 °C	101	Oxygenic (tough-pitch) copper with an electrical conductivity in the soft condition of ≥ 58.58 m/Ωmm² at 20 °C.
Oxygen-free copper, non-deoxidized						
Cu-OF1 (OF-Cu)	CW 007 A	Cu 99.95	8.9	1,083 °C	101	High-purity copper, largely free of elements that evaporate in vacuum, with an electrical conductivity in the soft condition ≥ 58.58 m/Ωmm² at 20 °C. Intermediate material meeting high requirements on hydrogen resistance; welding and hard soldering capability. For vacuum systems and electronics.

International Annealed Copper Standard = IACS

Electrical conductivity of copper = min. 58 m/Ωmm² = 100 % IACS

Excerpt from DIN CEN/TS 13388 and EN 1977 – Alloys

Symbol	Material number	Composition	Density	Melting point	% IACS min.	Information regarding properties and use
CuAg 0.1	CW 013 A	Ag min. 0.08 max. 0.12	8.9	1,083 °C	98	Copper alloys with high tensile strength electrical conductivity of ≥ 57 m/Ωmm² at 20 °C in a soft condition.
CuMg 0.2	CW 127 C	Mg ⁶ min. 0.14 max. 0.26	8.9	1,078 °C	75	Copper alloys with high tensile strength electrical conductivity of ≥ 44 m/Ωmm² at 20 °C in a soft condition.
CuSn 0.3 ⁶⁶	CW 129 C	Sn ⁶ min. 0.25 max. 0.35	8.9	1,065 °C	72	Copper alloys with high tensile strength electrical conductivity of ≥ 42 m/Ωmm² at 20 °C in a soft condition.

Tolerance deviating from DIN CEN/TS 13388
Symbol deviating from DIN CEN/TS 13388

Excerpt from EN 573 – Aluminium

Symbol	Material number	Composition	Density	Melting point	% IACS min.	Information regarding properties and use
EAI 99.7	1370	Al 99.7	2.7	659 °C	62	Aluminium with electrical conductivity of ≥ 35.5 m/Ωmm² at 20 °C in a soft condition.

Alternative conductor materials

Application

Low-current and signal cables for use in the automotive industry or for industrial applications.

Material	Material Standard
CuAg	Copper Silver low alloyed copper
CCS	ASTM B 227, ASTM B 228, ASTM B 452
CuMg	DIN CEN/TS 13388
CuSn	DIN CEN/TS 13388

Characteristics

	0.22	7	0.21	0.7	210	0.2	1.2	2.9	

FLR – symmetric conductor construction type A with ultra-thin wall thickness

	Nominal cross-section	Conductor construction				Insulation	Cable		
		No. of strands	Diameter of single wire max.	Diameter of conductor max.	Electrical resistance at 20 °C max.		Wall thickness min.	Outer diameter max.	
							mm	kg/km	
CuAg01	0.17	7	0.18	0.56	105	0.16	1.0	2.3	

Coding key

The type designation provides information on the type of wire, the insulation and sheath materials used and the principle design features in abbreviated and simplified form. Further details are listed in DIN 76722.

1.	Type of cable	Automotive cable Automotive ignition cable
2.	Conductor materials Copper is not named additionally * The composition of the alloys is fully specified. Examples: CuMg02, CuSn03, CuAg01	Aluminum Resistance conductors Other conductor materials Copper alloys* Aluminum alloys* Copper Clad Steel
3.	Geometric construction of insulation	Ultrathin thickness of insulation acc. to ISO 6722-1 Reduced thickness of insulation acc. to ISO 6722-1 Thick wall acc. to ISO 6722-1 (is not identified) Ultrathick insulation (thickness bigger than specified in ISO 6722-1)
4.	Codes for conductor materials Designations used as abbreviations for insulation materials	Soft-PVC (Polyvinyl chloride plasticized) Soft-PVC (Polyvinyl chloride, heat-resistant) Soft-PVC (Polyvinyl chloride, cold-resistant) PE (Polyethylene) PA (Polyamide) PTFE (Polytetrafluoroethylene) FEP (Fluorinated ethylene propylene) ETFE (Ethylene tetrafluoroethylene) PP (Polypropylene) PVDF (Polyvinylidenefluoride) TPE-U (Thermoplastic elastomer on polyurethane basis, PUR) TPE-E (Thermoplastic polyester elastomer on polyether ester basis) TPE-E (Thermoplastic polyester elastomer on polyester ester basis) TPE-S (Thermoplastic polyester elastomer on polystyrene basis) TPE-A (Thermoplastic polyester elastomer on polyamide basis) PFA (Perfluoroalkoxy copolymer) PVC-X (Polyvinyl chloride crosslinked) PE-X (Polyethylene crosslinked) SIR (Silicone rubber) EVA (Ethylene/vinyl acetate)
5.	Codes for constructional elements Codes for further constructional elements and non-extruded coverings	Foil shield Copper wire braiding Copper wire spiral shield Glass fiber braiding Insulation foil Textile braiding
6.	Conductor cross-section and construction These are at the end of the respective designation block. The following different constructions are used for the conductor	Symmetric conductor structure acc. to ISO 6722-1 Asymmetric conductor structure in accordance with ISO 6722-1 Multi-strand conductor structure in accordance with ISO 6722-1**
7.	Surface conductor coating In some cases the type of metal plating is specified as follows	Tin-plated Nickel-plated Silver-plated

** Especially flexible or highly flexible stranded conductors are identified by additional specification of the nominal diameter of the single wire.

LEONI Mocar® 125 XC	XLPE (polyethylene, peroxide) crosslinked, halogenfree	32
LEONI Mocar® 125 G	XLPO soft / XLPE (polyolefin, soft, cross-linked / polyethylene, cross-linked) or XLPO extra soft / XLPE (polyolefin, extra-soft, cross-linked / polyethylene, networked)	32
Cables according to American standards		
TWP	with thin wall PVC insulation	36
TXL	with thin wall, crosslinked PE insulation	36
WTA	with ultra-thin wall PVC insulation	37
WXC	with ultra-thin wall XLPE insulation	37
Cables according to Japanese standards		
AV	with PVC insulation	38
AVS	with PVC insulation	38
AVSS	with thin wall PVC insulation	39
Special cables		
FL11Y	with TPE-U insulation battery cables	40
FLYY	with core insulation and PVC sheath	40
Twisted cables		
FLRY n x...	Twisted cables unshielded (without sheath)	41

LEONI Mocar® W... / LEONI SHC... heating cable

high temperature resistant, for applications in the engine compartment / interior

Description	Insulation material	Electrical resistance at 20 °C	Temperature range (3,000 hrs)
		Ω/km	°C
Heating cables for applications in the engine compartment			
LEONI Mocar® 150 C W...	TPE		-40 °C to +150 °C
LEONI Mocar® 180 E W...	ETFE		-65 °C to +180 °C
LEONI Mocar® 210 F W...	FEP		-65 °C to +210 °C
LEONI Mocar® 260 T W...	PFA		-80 °C to +260 °C
LEONI Mocar® 260 R W...	PTFE		-90 °C to +260 °C

Temperature range (3,000 hrs)

variable **-90 °C to +260 °C**

Construction / materials

depending on requirements see table

Special properties

Over a defined electrical resistance, the heating cables can be used for a wide range of applications.

Examples for applications

Seat heating
Hose heating

Heating cables for applications in the interior			
LEONI SHC Y...	PVC		-40 °C to +105 °C
LEONI SHC 12Y...	TPE		-40 °C to +105 °C
LEONI SHC 7Y...	ETFE		-65 °C to +180 °C
LEONI SHC 6Y...	FEP		-65 °C to +210 °C

Conductor construction (LEONI SHC)	
C	Soft-annealed electrolytic copper Cu-ETP1
T	Tinsel Core thread braided with laminated copper wires
E	Enamelled copper wire conductors Single wires with laquer coating
H	Hybrid conductors Strand with individual wires made of various materials
R	Special conductor with incorporated strain-relief element
A	Alloy

Examples

Example LEONI Mocar® 180 E W550

Description	Max. continuous use temperature (insulation material)	Electrical resistance
LEONI Mocar®	180 E	W550

Example LEONI SHC 7Y A 2000

Description	Insulation material	Conductor construction	Electrical resistance
LEONI SHC	7Y	A	2000

FLALRY with thin wall PVC insulation

Temperature range (3,000 hrs)

-40 °C to +105 °C

Construction / materials

Conductor Aluminium 99.7%, ≥ 1.25 mm²

Aluminium alloy < 1.25 mm²

Insulation Soft-PVC with properties according to ISO 6722-2, Class B

Special properties

Cables with cross-sections > 10 mm² can be used as battery cables

Considerable weight savings compared to copper

Standards / specifications

ISO 6722-2

Nominal cross-section	Conductor construction				Insulation	Cable			Weight approx.

⁶ Nominal value, tolerance of number of strands ≥ 6.0 mm² are permitted (± 5%).

⁶⁶ This cross-section with tinned stranded conductor is suitable for use with insulation displacement connectors.

⁶⁶ Also available with resistance values 52.0 / 53.1 mΩ/m bare / tinned.

FLRYW with thin wall PVC insulation

Type A / Type B, hot-pressure resistant

Temperature range (3,000 hrs)

-40 °C to +125 °C

Construction / materials

Conductor Soft-annealed electrolytic copper
Cu-ETP1 acc. to DIN EN 13602,
bare or tinned
conductor constr. acc. to ISO 6722-1

Insulation Soft-PVC with properties according
to ISO 6722-1, Class C

Special properties

Heat resistant cable
Suitable for applications inside the engine
compartment

⁶ Nominal value, tolerance of number of strands $\geq 6.0 \text{ mm}^2$ are permitted ($\pm 5\%$).

⁶⁶ Also available with resistance values 52.0 / 53.1 mΩ/m bare / tinned.

FLR4Y with thin wall PA insulation

Type A / Type B

Temperature range (3,000 hrs)

-40 °C to +105 °C

Construction / materials

Conductor Soft-annealed electrolytic copper
Cu-ETP1 according to DIN EN 13602,
bare or tinned conductor constr.
acc. to ISO 6722-1

Insulation PA (Polyamide)

Special properties

Outstanding fuel resistance
Especially suitable as fuel gauge wire

FLRYH with thin wall PVC insulation

fine wire, highly flexible

Temperature range (3,000 hrs)

-40 °C to +105 °C

Construction / materials

Conductor Soft-annealed electrolytic copper
Cu-ETP1 acc. to DIN EN 13602,
fine wire, bare

Insulation Soft-PVC, with properties according
to ISO 6722-1, Class B

Special properties

Flexible strand structure

⁶ Also available with resistance values 52.0 / 53.1 mΩ/m bare / tinned.

⁶⁶ Also available with a resistance of 52.0 mΩ/m.

⁶⁶⁶ Also available in highly flexible version.

LEONI Mocar® 125 S with TPE-S insulation

for flexible and standard applications

Temperature range (3,000 hrs)

-50 °C to +125 °C

Construction / materials

Conductor Soft-annealed electrolytic copper
Cu-ETP1 acc. to DIN EN 13602,
bare or tinned
conductor constr. acc. to ISO 6722-1

Insulation TPE-S insulation with properties
according to LV112-2, ISO 6722-1,
Class C

Special properties

Cables for flexible applications
Very good bending resistance
Use: Door, convertible top, rear hatch,
sliding door

⁶ Also available with increased wall thickness of the insulation.

⁶⁶ Also available with resistance values 52.0 / 53.1 mΩ/m bare / tinned.

Irradiation crosslinking

As a world leader in technology, LEONI expands and optimises the plastics it develops and uses with irradiation crosslinking.

Polyethylene macro molecules can be crosslinked three-dimensionally into PE-X or XLPE.

Irradiation crosslinked plastics are distinguished by improved thermal pressure deforming as well as very good

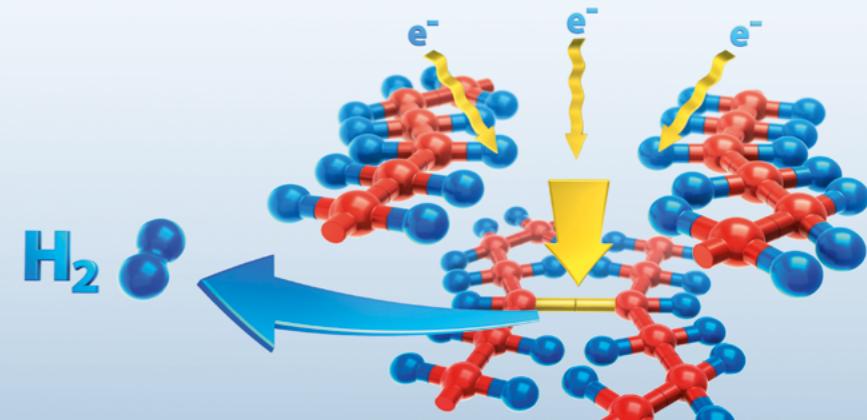

temperature resistance

chemical resistance

solvent resistant (increased swell resistance)

bending resistance

abrasion resistance.

LEONI Mocar® 125 XS with crosslinked PE insulation

Type A / Type B, heat-resistant

Nominal cross-section	Conductor construction				Insulation	Cable			Weight approx.		
	No. of strands	Diam. of single wire max.	Diam. of conductor max.	Electrical resistance at 20 °C max.		Outer diameter		Limit tolerance

Conductor	Soft-annealed electrolytic copper Cu-ETP1 acc. to DIN EN 13602, bare conductor constr. acc. to ISO 6722-1										
Insulation	TPE-E (Thermoplastic polyester elastomer) with properties similar to ISO 6722-1, Class D										
Special properties											
Resistance to hydrolysis											
Limited resistance to battery acid											
Use in headlight application											

⁶ Also available with a resistance of 52.0 mΩ/m.

LEONI Mocar® 180 E with ETFE insulation

Type A / Type B, high temperature resistant

Temperature range (3,000 hrs)

-65 °C to +180 °C

Construction / materials

Conductor	Soft-annealed electrolytic copper Cu-ETP1 acc. to DIN EN 13602, bare, tinned or silver-plated fine-wire stranded conductor according to ISO 6722-1
Insulation	ETFE (Ethylene tetrafluoroethylene) with properties acc. to ISO 6722-1, Class E

Special properties

Good mechanical and thermal properties
with excellent chemical resistance

Particularly suitable for wiring within the engine
compartment and as a fuel level indicator wire

Standards / specifications

LEONI Mocar® 210 F with FEP insulation

Type A / Type B, high temperature resistant

Temperature range (3,000 hrs)

-65 °C to +210 °C

Construction / materials

Conductor	Soft-annealed electrolytic copper Cu-ETP1 acc. to DIN EN 13602, bare, tinned, silver-plated or nickel-plated fine-wire stranded conductor according to ISO 6722-1
Insulation	FEP (Tetrafluoroethylene hexafluoropropylene) with properties according to ISO 6722-1, Class F

Special properties

Good mechanical and thermal properties
with excellent chemical resistance
Suitable for applications inside the engine compartment

Standards / specifications

LV 112-1 · VW 60306-1 · PSA B25 1110

Nom. cross-section	Conductor construction				Insulation	Cable

⁶ Ultra-thin wall thickness on request (ISO 6722-1).

⁶⁶ Also available with resistance values 52.0 / 53.1 mΩ/m bare / tinned.

LEONI Mocar® 260 T with PFA insulation

high temperature resistant

Temperature range (3,000 hrs)

-80 °C to +260 °C

Construction / materials

Conductor	Soft-annealed electrolytic copper Cu-ETP1 acc. to DIN EN 13602, bare, tinned, silver-plated or nickel-plated conductor construction acc. to ISO 6722-1
Insulation	PFA (Perfluoroalkoxy copolymer) with properties acc. to ISO 6722-1, Class H

Special properties

Excellent resistance to chemicals
Very good mechanical stability
Due to its high temperature resistance,
an equivalent alternative to PTFE

Standards / specifications

ISO 6722-1

TWP with thin wall PVC insulation

Temperature range

-40 °C to +85 °C (3,000 hrs)
+105 °C (48 hrs)

Construction / materials

Conductor Soft-annealed electrolytic copper
acc. to ASTM B3, conductor construction acc. to customer specification
Insulation PVC, insulation material according to SAE J 1128 / ESB-M1 L 120-A / MS-7889 / UTMS 12501

Special properties

Also available as GPT, HDT type and tinned version

Standards / specifications

American standards: SAE J1128

2.5	50	0.26	2.2	7.61	0.70	3.5	0.5	4.8	-0.5	41

Sheath options: adherent or separable from inner core

⁶ All cross-sections can also be supplied with reduced insulation thickness (FLRYY).

FLRY n x... Twisted cables

unshielded (without sheath)

Temperature range (3,000 hrs)

-40 °C to +105 °C

Construction / materials

Conductor	Soft-annealed electrolytic copper Cu-ETP1 acc. to DIN EN 13602, bare or tinned conductor constr. acc. to ISO 6722-1
Insulation	Plasticized PVC with properties according to ISO 6722-1, Class B

Con- struction	Conductor construction core			Insulation core		Cable			
	No of cores x nominal cross-section	No. of strands	Diam. of single wire max.	Diam. of conductor max.	Electrical resistance at 20 °C max.	Wall thick-ness min.	Core diam. nom.	Lay length max.	Outer diam. approx.

Quality and environmental management

LEONI – The Quality Connection

LEONI quality management

With our quality management, we meet the extraordinarily high demands of our customers from the automobile industry. The wire and cable production locations of LEONI are certified worldwide in accordance with ISO 9001:2008; all locations in which automotive cables are produced are certified in accordance with ISO/TS 16949:2009. We place extreme importance on preventative quality assurance, whereby error prevention instrumentation, such as FMEA or machine and process capability analyses are firmly rooted.

During the production process, we continuously measure, monitor and regulate the diameter and properties of the insulation of our cables and lines with the latest systems. Through regular random testing, the production testing assures adherence to the requisite thresholds. These tests in the immediate production area guarantee a quick reaction to disturbances.

In accordance with customer specifications and/or domestic and international rules and regulations, we test the following, among other things:

- the behaviour of the cables and lines under extreme temperature conditions
- functionality after artificial ageing
- resistance to fuels, lubricants and environmental influences
- expansion, abrasion and tear-resistance of the insulating sleeve
- mechanical and electrical properties of the conductor
- bending and torsional resistance

The interplay of these quality assurance measures enables continuous optimisation of our ambitious quality goals.

LEONI environmental management

Environmentally-conscious thinking and action are future-oriented factors for LEONI.

As a successful, globally-producing company, LEONI assures active and effective implementation of its environmental policy:

Environmentally-friendly production

Preservation of natural resources in the product and process development

Prevention of emissions

Waste reduction

We are happy to advise our customers about the environmentally-friendly handling and disposal of our products.

Our organisation is certified in accordance with DIN EN ISO 14001:2004.

LEONI worldwide

Automotive Cables facilities of the LEONI Group

Sales offices

Technical support – Automotive Cables

Production facilities – Automotive Cables

Proximity to our customers is a core element of our corporate policy. LEONI is a dependable partner to its customers – all over the world. We also regard maintaining, as well as raising quality and service at the same high level everywhere in the world as a sign of proximity.

We support efficient operating as well as our customers' power of innovation and market position on the basis of our own international positioning, standardised methods and clearly defined processes.

No matter where we apply and realise our know-how, commitment and ideas: we want confident customers around the world.

An overview of all entities

Germany

LEONI Kabel GmbH, Roth
LEONI HighTemp Solutions GmbH, Halver

Mexico

LEONI Cable Mexico S.A. de C.V., Cuauhtémoc

Poland

LEONI Kabel Polska Sp.z.o.o., Kobierzyce

Slovakia

LEONI Slovakia spol. s.r.o., Nová Dubnica

Japan

LEONI Wire & Cable Solutions Japan K.K., Aichi

India

LEONI Cable Solutions (India) Pvt. Ltd., Pune

Hungary

LEONI Kábelgyár Hungaria Kft., Hatvan

USA

LEONI Cable Inc., Rochester
