

Wiring Systems Division

Occupational health and safety, environmental protection and energy policy

Sustainable value creation is a cornerstone of LEONI's business activities. Our sustainability strategy is based on three pillars: economic, social and ecological responsibility.

As a global provider of products, solutions and services for energy and data management in the automotive sector and other industries, LEONI is particularly committed to the principle of sustainability.

Our aim is to harmonize the different requirements arising from these three different areas. In doing so, we want to ensure stability, secure the future of our company and make a contribution to the sustainable development of the economy and society.

As a global company, LEONI has set itself the task of ensuring compliance with human rights, environmental protection, increased energy efficiency and the recognition of labor standards at all LEONI facilities worldwide, which is supported by internationally recognized management systems.

Our Principles:

- Social and ecological behavior are key corporate objectives
- Compliance with all binding obligations regarding occupational health and safety, environmental protection and energy use.
- Occupational health and safety, environmental protection, the responsible use of energy and resources is part of all leadership roles.
- Striving for continuous improvement of our occupational, health, safety, environmental and energy performance
- Reducing the environmental impact of our products and processes, particularly on air, water, soil and biodiversity, within the limits of economic efficiency and technical feasibility
- Hazardous substances are only used if required by the production processes; the substitution principle applies here
- Efficient use of environmental resources and energy
- Use of renewable energies in our production plants
- Avoidance of emissions and waste in our production processes, unavoidable production waste is recycled or reused wherever possible, but at least disposed in accordance with legal requirements
- Providing safe and healthy workplaces and working conditions by eliminating hazards and reducing risks in order to prevent work-related injuries and illnesses.
- Performance of risk assessments in all processes to prevent work-related injuries and illnesses
- After exhausting all technical and organizational protective measures, we provide personal protective equipment
- Creating and promoting mutual trust through dialogue with all stakeholders involved, internally in particular with our employees and their representatives.
